Qornex Staking

Qornex Staking Reward

$$APY = \frac{S}{V} \times F \times 100\%$$

Reward is calculated on a weekly basis using the APY (Annual Percentage Yield) formula. The APY is set for one week and interest will be credited based on it.

Stands for the overall size of the shared staking pool

S

Stands For The Volume Of Users' Staked Assets

V

Stands for a factor set on a weekly basis to ensure stability of the reward

F

Stake 1

30 days

Steaking

× 1 233

Stage, day%

44 % Stake

Once the platform launches, zero week of staking will begin. The first APY will be calculated after the zero week. Participants who stake during week zero will receive a bonus in the form of a percentage of their deposit amount.

Distribution of the Hub fund

The hub is the starting point from which the partner structure begins to develop

The funds coming to the hub are automatically distributed as follows

25% marketing

25% shared staking pool

Hub

burning **25%**

leader pool **25%**

FRGX Burning

Qornex is accumulating a pool of FRGX tokens for the purpose of burning them.

Hub

25%

from the profit received

2%

Activation

Level

from each level activation

Burning

is sending tokens to a non-existent blockchain address which leads to their irreversible withdrawal from circulation

Deflationary Model

maintains a balance between supply and demand, allowing a portion of the emission to be taken out of circulation.
